

AI systems.

Built with intent.

Shadow Sect is Klaus's independent AI studio and product lab. The focus: AI developer tools, useful applications and custom automation, built with an open-source ethos.

01 / WHAT THE STUDIO BUILDS

Custom agents and workflows, LLM applications, MCP integrations, developer infrastructure, and model evaluation or tuning pipelines. Engagements begin with a defined outcome and an agreed scope.

02 / PRODUCT DIRECTION

Wraith (agent harness), Umbra (model routing), Relay (workflow automation), Sigil (skill toolkit), Nexus (MCP connectors) and Crucible (evaluation). These are proposed concepts, not public product releases.

03 / PUBLIC EVIDENCE

The public GitHub profile is the source of truth for repositories and current work. Repository licenses and documentation define what is available. This overview makes no claims about revenue, shipped-tool counts or customer traction.

github.com/itzKLAUS

04 / HOW PARTNERS CAN HELP

Compute, model API credits and infrastructure can support evaluation and development. Distribution can help useful tools reach builders. Support starts with an agreed objective and a clear way to report its use and progress.

Start a conversation.
